

Step 1: Load a picture of a plot through File-> Load Image

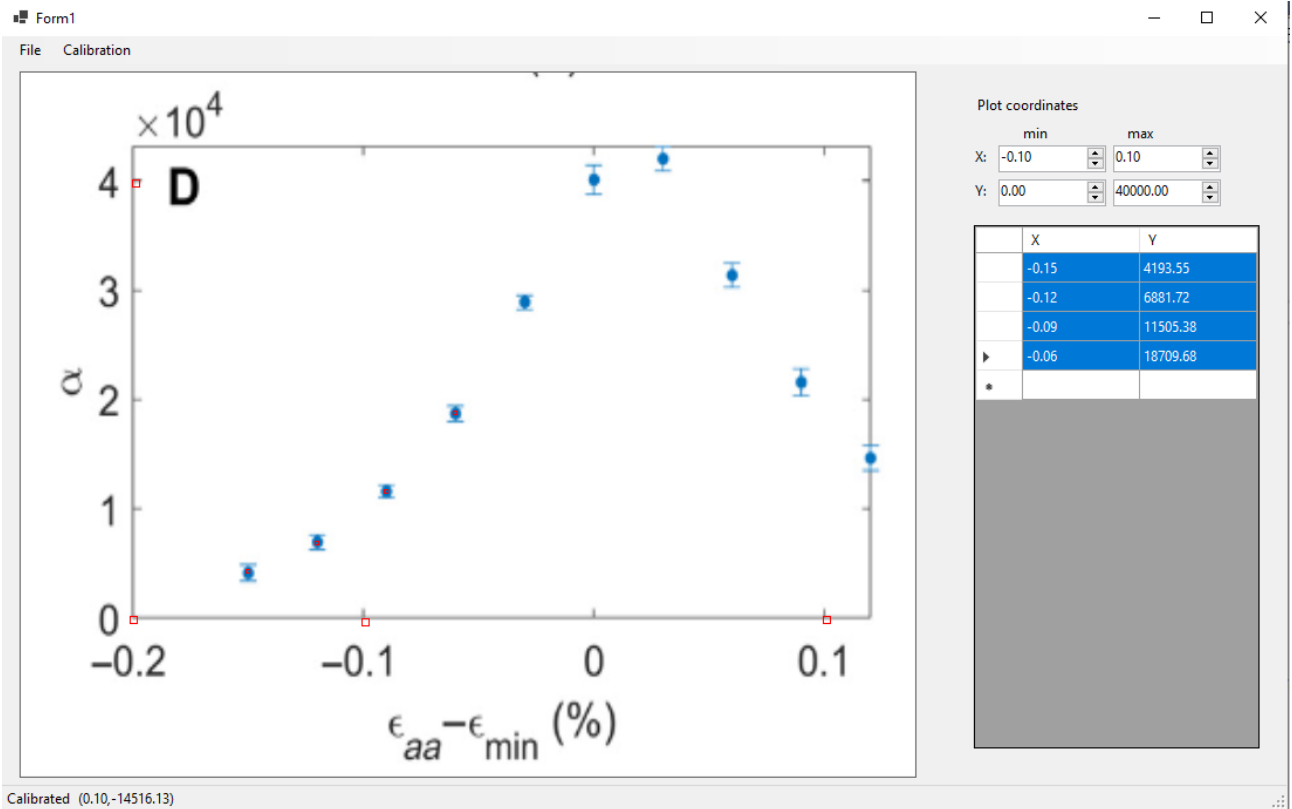

Step 2: Start the calibration procedure through Calibration -> Start calibration

Step 3: Follow the instructions in the lower left status label, clicking four calibration points. Click points on the plot corresponding to an identifiable lower x, upper x, lower y, then upper y in that order.

Step 4: After calibrating the four points, enter the corresponding plot coordinates in the upper right numeric entry

Step 5: After all calibration is complete, click on points inside the plot. The data grid will update with the calibrated values, and the data can be copy & pasted into a text or excel file.
